

```
<Button
    android:id="@+id/button"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_marginTop="136dp"
    android:text="@string/show_toast"
    android:onClick="showToast"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
```

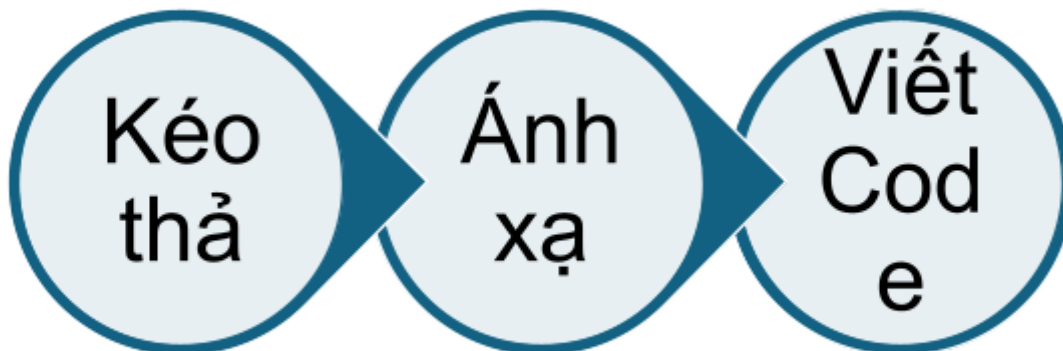

Create function to run button Show Toast:

Mehod 1: create function from file .xml:

```
<Button
    android:id="@+id/button"
    android:layout_width="wrap_content"
    android:layout_height="wrap_content"
    android:layout_marginTop="136dp"
    android:text="@string/show_toast"
    android:onClick="showToast"
    app:layout_constraintEnd_toEndOf="parent"
    app:layout_constraintStart_toStartOf="parent"
    app:layout_constraintTop_toTopOf="parent" />
```

```
public void showToast(View view) { 1 usage
    Toast.makeText(context: this, text: "This is a Toast", Toast.LENGTH_SHORT).show();
}
```

Mehod 2: create function with **implements View.OnClickListener**:

```
public class MainActivity extends AppCompatActivity implements View.OnClickListener
```

```
Button button; 2 usages
```

```
button = findViewById(R.id.button);  
button.setOnClickListener(this);
```

```
@Override  
public void onClick(View view) {  
    Toast.makeText(context: this, text: "This is a Toast", Toast.LENGTH_SHORT).show();  
}
```

Method 3:

```
Button button; 2 usages
```

```
button = findViewById(R.id.button);  
button.setOnClickListener(new View.OnClickListener() {  
    @Override  
    public void onClick(View view) {  
        Toast.makeText(context: MainActivity.this, text: "This is a Toast", Toast.LENGTH_SHORT).show();  
    }  
});
```
