

```
dependencies {

    ...

    implementation 'com.android.volley:volley:1.2.1'
    implementation 'com.squareup.picasso:picasso:2.8'

}
```

onCreate trong main activity:

```
protected void onCreate(Bundle savedInstanceState) {
    super.onCreate(savedInstanceState);
    setContentView(R.layout.activity_main);
    txtCityName = findViewById(R.id.txtCityName);
    txtTemperature = findViewById(R.id.txtTemperature);
    txtCityTemperature = findViewById(R.id.txtCityTemperature);
    editTextTextPersonName =
findViewById(R.id.editTextTextPersonName);
    imgSearch = findViewById(R.id.imgSearch);
    imgSeasonForecast = findViewById(R.id.imgSeasonForecast);
    lvWeatherForecast = findViewById(R.id.lvWeatherForecast);
    lvWeatherForecast.setAdapter(weatherAdapter);
    GetData("Hanoi");
    imgSearch.setOnClickListener(new View.OnClickListener() {
        @Override
        public void onClick(View view) {

            GetData(editTextTextPersonName.getText().toString());
            //weatherAdapter.notifyDataSetChanged();

        }
    });
}
```

Adapter:

```

@Override
public View getView(int i, View view, ViewGroup viewGroup) {

    if (view == null) {
        view =
LayoutInflater.from(context).inflate(R.layout.layout_weather_items, null);
    }
    TextView txtTimeForecast =
view.findViewById(R.id.txtTimeForecast);
    TextView txtTemperatureForecast =
view.findViewById(R.id.txtTemperatureForecast);
    TextView txtWindForecast =
view.findViewById(R.id.txtWindForecast);
    ImageView imgForecast =
view.findViewById(R.id.imgForecast);

    WeatherForecastModel weatherForecastModel =
weatherForecastModelList.get(i);
    txtTimeForecast.setText( "" +
weatherForecastModel.getTime() );

txtTemperatureForecast.setText(weatherForecastModel.getTemperature()+"°C");

txtWindForecast.setText(weatherForecastModel.getWindSpeed()+"km");

Picasso.get().load("https:"+weatherForecastModel.getIcon()).into(imgForecast);
//imgForecast.src(weatherForecastModel.getTemperature());

    return view;
}

```

Hàm GetData dùng Volley để lấy dữ liệu về:

```

private void GetData(String cityName) {
    String url
    ="https://api.weatherapi.com/v1/forecast.json?key=fc8f4188ad3f4
    8d8a10132707221212&q="+cityName+"&days=1&aqi=no&alerts=no";
    RequestQueue requestQueue =
    Volley.newRequestQueue(MainActivity.this);
    Log.d("BBB",url.toString());
    txtCityName.setText(cityName);
    weatherForecastModelList.clear();
    JsonObjectRequest jsonObjectRequest = new
    JsonObjectRequest(Request.Method.GET, url, null,
        new Response.Listener<JSONObject>() {
            @Override
            public void onResponse(JSONObject response) {
                //String temperature =
                response.getJSONObject("current").getString("temp_c");
                try {
                    String temperature =
                    response.getJSONObject("current").getString("temp_c");
                    txtTemperature.setText(temperature+"°C");
                    String condition =
                    response.getJSONObject("current").getJSONObject("condition").ge
                    tString("text");
                    String conditionicon =
